RIFT: Engineering Simplicity in IP Fabric

Thursday, 15 April 2021 17:30 (30 minutes)

An introduction to a new and novel routing protocol for the datacenter; Routing in Fat Trees or in short RIFT. In this presentation we will dive into what challenges RIFT solves over the use of OSPF, IS-IS and BGP in the datacenter. I will also give an update on the status of the work in IETF and point out to some implementations.
