## Lessons learnt from hunting an old Linux kernel bug

*Thursday, 15 April 2021 16:30 (30 minutes)*

The story behind a recent blogpost of ours: <https://engineering.skroutz.gr/blog/uncovering-a-24-year-old-bug-in-the-linux-kernel/>

I will try to cover the aspects *not* covered extensively in the blogpost, i.e. the interaction with the Linux kernel community, the availability of tools and how it has impacted kernel debugging over time, etc. Additionally, I will comment on the responses to the post itself, demonstrating why this bug may have remained uncovered for 24 years.
